Constructed Wetland and Pocket Wetland Design Summary

Stormwater Management Construction Plan Review:

A complete stormwater management construction plan submittal includes a design summary for each stormwater BMP, design calculations, plans and specifications showing BMP, inlet and outlet structure details.

I. PROJECT INFORMATION

Project Name: _____ Phase _____

PIN: _____ Case #: _____

Design Contact Person: _____ Phone #: (____) ____-_____

Legal Name of Owner: _____

Owner Contact: _____ Phone #: (____) ____-_____

Owner Address: _____

Deed Book _____ Page # _____ or Plat Book _____ Page# _____ for BMP Property

For projects with multiple basins, specify which pond this worksheet applies to: _____

Does the proposed pond also incorporate stormwater detention? Yes No

Detention provided for: _____ 1-year _____ 2-year _____ 10-year _____ other _____

Dam Height: _____ (feet) Dam Classification: _____

Elevations

| | | |
|---|-------|--|
| Wetland bottom elevation | _____ | ft. (<i>floor of the wetland</i>) |
| Permanent pool elevation | _____ | ft. (<i>invert elevation of the orifice</i>) |
| Temporary pool elevation | _____ | ft. (<i>elevation of the structure overflow</i>) |
| 1-year storm orifice/weir elevation | _____ | ft. (<i>invert elevation</i>) |
| 1-year storm water surface elevation | _____ | ft. |
| 2-year storm orifice/weir elevation | _____ | ft. (<i>invert elevation</i>) |
| 2-year storm water surface elevation | _____ | ft. |
| 10-year storm orifice/weir elevation | _____ | ft. (<i>invert elevation</i>) |
| 10-year storm water surface elev. | _____ | ft. |
| Emergency spillway elevation | _____ | ft. (<i>invert of emergency spillway</i>) |
| Top of embankment/dam | _____ | ft. (<i>elevation</i>) |
| Maximum water surface elevation | _____ | ft. (<i>max. storm pond can safely pass</i>) |
| Depth from design storm to Lowest orifice elevation | _____ | ft. |

Areas

| | | |
|---|-------|---|
| Permanent pool area provided | _____ | ft ² (<i>water surface area at orifice invert elevation</i>) |
| Minimum required perm. pool area | _____ | ft ² (<i>calculated surface area required</i>) |
| Design storm surface area | _____ | ft ² (<i>Specify frequency event: _____ year</i>) |
| Drainage area (10-acres min to Constructed Wetland) | _____ | ac. (<i>total drainage to the wetland</i>) |

Discharges (Specify only applicable frequency events)

At BMP

| | | | | |
|----------------|-----------|-----------|-----------|-----------|
| | 1-year | 2-year | 10-year | ____-year |
| Inflow | _____ cfs | _____ cfs | _____ cfs | _____ cfs |
| Routed outflow | _____ cfs | _____ cfs | _____ cfs | _____ cfs |

At Analysis Point(s) that BMP Contributes to

| | | | | |
|--------------------------------|-----------|-----------|-----------|-----------|
| | 1-year | 2-year | 10-year | ____-year |
| Pre-development | _____ cfs | _____ cfs | _____ cfs | _____ cfs |
| Post-development w/o detention | _____ cfs | _____ cfs | _____ cfs | _____ cfs |
| With detention | _____ cfs | _____ cfs | _____ cfs | _____ cfs |

Volumes

| | | |
|---|-------|---|
| Permanent pool volume | _____ | ft ³ (volume of main pond and forebay) |
| Water quality pool storage volume | _____ | ft ³ (volume above permanent pool) |
| Design storm storage volume | _____ | ft ³ (volume above permanent pool) |
| Total Storage volume provided at design storm | _____ | ft ³ |
| Total Storage volume provided at top of dam | _____ | ft ³ |
| Forebay volume (Constructed Wetlands only) | _____ | ft ³ |

Environmental Zones

| Zone | Water Depth at Normal Pool ¹ | Water Depth at Temporary Pool (Max Depth of 12-inches above Normal Pool) ¹ | Portion of Temporary Pool Surface Area |
|--------------|---|---|--|
| Deep Pool | | | |
| Low Marsh | | | |
| High Marsh | | | |
| Woody Upland | | | |

¹ Depths are to be calculated using the hydraulic depth calculation for each zone. Hydraulic Depth is the volume of water at an elevation divided by the water surface area at the same elevation.

Other Parameters

| | | |
|---------------------|-----------|---|
| SA/DA ² | _____ | (from DWQ table) |
| Diameter of orifice | _____ in. | (must provide draw down over 2 to 5 day period) |
| Draw-down time | _____ hrs | |
| Design TSS removal | _____ % | (minimum 85% removal required) |

² When using the SA/DA tables from the NCDENR BMP Manual, linear interpolation may be used for values between table entries.)

Riser/Principal and Emergency Spillway Information

| | | | |
|-------------------------------|-------------------|--------------------|--------------|
| 1-year storm orifice/weir | diameter_____ in. | length _____ft. | |
| 2-year storm orifice/weir | diameter_____ in. | length _____ft. | |
| 10-year storm orifice/weir | diameter_____ in. | length _____ft. | |
| ____- year storm orifice/weir | diameter_____ in. | length _____ft. | |
| Principal spillway | diameter_____ in. | | |
| Emergency spillway | width_____ ft. | side slopes ____:1 | slope _____% |

II. REQUIRED ITEMS CHECKLIST

The following checklist outlines design requirements. Initial in the space provided to indicate the following design requirements have been met and supporting documentation is attached.

Applicant’s initials

- _____ a. The forebay volume is approximately equal to 20% of the pond volume.
- _____ b. The temporary pool controls runoff for water quality design storm.
- _____ c. The temporary pool draws down in 2- to 5-days.
- _____ d. The drainage area to a Constructed Wetland is at least 10-acres. Smaller drainage areas to Pocket Wetlands will be reviewed on a case-by-case basis.
- _____ e. Riprap outlet protection, if provided, reduces flow to non-erosive velocities (provide calculations).
- _____ f. The wetland length to width ratio is greater than or equal to 3:1.
- _____ g. The wetland side slopes above the permanent pool area are no steeper than 3:1.
- _____ h. A submerged and vegetated shelf with a slope no greater than 6:1 is provided around the perimeter of the pond (show on plan and profile and provide a vegetation plan).
- _____ i. Vegetative cover above the permanent pool elevation is specified. No woody vegetation is permitted on the embankment.
- _____ j. A surface baffle, trash rack or similar device is provided for both the overflow and orifice. Flat top trash racks are not acceptable. Access hatch has been provided.
- _____ k. A recorded drainage easement is provided for each pond including access to the nearest right-of-way and is graded per Section 8.3, Stormwater Control Facilities (BMPs).
- _____ l. If the basin is used for sediment and erosion control during construction, a note requiring clean out and vegetative cover being established prior to use as a wet detention basin shall be provided on the construction plan.
- _____ m. A mechanism is specified which will drain the pond for maintenance and emergencies. Valves used shall be plug valves.
- _____ n. Anti-floatation calculations are provided for riser structure.
- _____ o. A plan view of the wetland with grading shown is provided.
- _____ p. A profile through the forebay, wetland and spillway is provided. Water surface elevations are shown on the profile.
- _____ q. Riser structure details are provided.
- _____ r. Dam designed to account for a 5.00% settlement factor.
- _____ s. Compaction specifications for the embankment are shown on the plan.
- _____ t. The minimum top of dam width has been provided for the wetland embankment top width per Section 8.3, Stormwater Control Facilities (BMPs)

Note: Executed Stormwater Facility Operation and Maintenance Permit Agreement, payment of permit fee per facility and payment of surety are required prior to construction drawing approval
